

Where seaweed grows, **communities thrive**

Investor Pitch Deck 2026

Alison Duguid – Founder & CEO

Over 200 mine site are projected to go into closure by 2040

Depleted topsoil

Remote locations

Localised economic downturn

Our Vision

To develop seaweed hubs for economic development and positive environmental impact in North Australia

Technical leadership and innovation

Traditional owner owned & operated sites

Net positive impact to marine and land-based environments

Solution Focused Model

Projects

Products

Partnerships

Example Project Areas

Broome

Cultivation: Aquaculture co-location with pearling

Target markets:

- Pilbara soil remediation
- Aquaculture feed

Nhulunbuy

Cultivation: existing mining infrastructure for cultivation

Target markets:

- Rio Tinto soil remediation
- Edible seaweed

Darwin

Cultivation: existing lagoon

Target markets:

- Mango farming
- Edible Seaweed
- Dugong rehabilitation

Product Development

Soil Improvers

Pigments

Thickeners

**Low Processing
Intensity Extraction
(*SeaCulture IP*)**

Primary Product: Soil Improvers

Water holding capacity

Nutrients

Organic matter

Mine Site
rehab

Agriculture

Land
restoration
projects

Strategic Partnerships

Technical experts

Governance

Aquaculture specialists

Local knowledge

Future Partnerships

- Mine closure sites (in progress)
- Local farmers (in progress)
- Agar retailers
- Confectionary companies
- Make-up manufacturers

Traction to date

Projects

- Darwin Waterfront Lagoon Growth Trials
- Surveys of Nhulunbuy, Darwin & Cygnet Bay identifying target species
- Shared user facility access for trials in Cone Bay

Products

- Proven soil improver product
- Successful gel extraction
- Early discussions with mining organisations for soil rehab trials

Partnerships

- Developing East Arnhem Land
- Kimberly Land Council
- Leading Indonesian research organisations
- WA Marine Science Institute & Biodiversity Institutes

Primary Product Market: Soil Rehab

Australian Market

- Soil health/ rehabilitation is a multi-billion-dollar market across a range of industries
- CSIRO estimate mine closure to cost between **\$4 billion to \$8 billion** over the next 20 years.
- SeaCulture expects approx. 15% of these costs to be designated to soil rehab and long-term care
- In 2024, Australia consumed 8.7 million tonnes of fertilizer valued at **A\$5.5 billion**, with imports accounting for over 90% of this market

Our Market

SeaCultures Soil rehabilitation products will focus on mine site rehabilitation products followed by local horticulture to offset synthetic fertilisers

Example 1: Nhulunbuy Rio mine closure in 2030 is expected has a budget of over \$900mil over 12 years with 1600 Ha of land still needing rehabilitation

Example 2: The Territory mango industry produced equivalent to \$2.4 million of mangos in 2025, with 50% of gross revenue being spent on farm inputs such as fertiliser

The Wider Seaweed Market

Allied Market Research valued the global seaweed market at USD\$7.5 billion in 2024, with red seaweed markets expected to grow. SeaCulture will service this market while providing soil products for regional rehabilitation sites.

Our Competitors

With multiple product streams, SeaCulture has competition across multiple markets but a unique advantage of local knowledge and customers

Staged Development

SeaCulture is currently looking to **establish key partners** in our target regions and **raise \$1.5 million** for the below key activities.

Stage 2 & 3 Funding Focus

SeaCulture is currently **establishing key partners** in our target regions and **raising \$1.5 million** for the following key activities

Stage 1	Stage 2	Stage 3	Stage 4	Stage 5+
✓ Region selection ✓ Species validation ✓ Market identification ✓ Key partnerships ✓ Pilot Site	• Site validation • Engineering design • Offtake agreements	• Site trials • Product refinement • Internships	• Site scale-up • New site & species • Product trials	• New product stream • Additional site scale-up • Net revenue generation

- **\$180k** - Seed material / Hatchery
- **\$270 k** - Site Development incl. compliance, environmental monitoring, lease & licencing
- **\$420k** – Product Stream Development i.e. Processing, cultivation & engineering
- **\$630k** - Team & Governance

Supporting Material

Core Team

Alison Duguid
Founder / CEO

As a fifth-generation Territorian, Alison has always been passionate about developing projects in the North. Her chemical engineering and management background has exposed her to industries such as mining, emerging tech, offshore decommissioning, water and waste management. She recently commenced her PhD to develop extraction techniques for seaweed-derived products with a focus on technology adoptable in regional Australia

Margie & Michael Rule
Seaweed Experts / Marine Biologists

Margie and Michael have over 20 years of combined experience in the seaweed industry and are both well-known advocates. With their background in marine biology, they started their own consulting service, Drift, to provide independent, industry-ready research for companies both nationally and internationally. Drift will support seaweed farming, training and site development for NASC.

Benjamin Piercey
Finance / Compliance

Ben Piercey is a Chartered Accountant at RSM Esperance, providing taxation, accounting, and advisory services across regional Western Australia. He holds a Bachelor of Commerce with majors in Accounting and Taxation and has completed his CA qualification. Ben has experience in both Big 4 and mid-tier firms and is actively involved in the agricultural industry, also working within his family's farming enterprise. He holds multiple volunteer board positions, reflecting his commitment to strong governance and supporting regional communities.

Specialist Advisors

Greg Riebe
Innovation Advisor

Greg Riebe is a seasoned figure in WA's tech investment landscape. His 40-year career brings experience to every stage of the innovation process and a diverse range of industries, scalable business models and enabling technologies. Greg has also been a co-founder of multiple businesses and is the principal of his advisory practice. In 2020, Greg was the Australian Angel Investor of the Year and received the WA Pearcey Entrepreneur Award.

Ingrid Oyarzun
Technical Advisor

With 20+ years experience in mining, sustainability and innovation, Ingrid provides unparalleled experience in managing and delivery complex project portfolios internationally from Chile to Australia. Her current role involves leading Eramet Ideas, based in Trappes France to meet global sustainability targets across the mining complete supply chain. With her background in Chemical Engineering she provides guidance both in and outside the mining sector

Steven Rowe
Technology Innovation

Steven is the founder and CEO of SRA Information Technology, an Australian IT consulting firm based in the NT and SA. Founded in 1992, the company has expanded across Australia and Singapore. Steve has been appointed to multiple prominent associated including (but not exclusive to) NT Ministerial Digital Advisory Council, the Australian Information Industry Association, AIIA Mining and Energy Resources Group, and the NT Research and Innovation Board.

Katrina Fong Lim
Local Advisor / Governance

Katrina is a well-respected public figure in the Northern Territory who served as Lord Mayor of Darwin in 2012. She is an Order of Australia medallist with extensive experience working with local under privileged communities through her roles in the not-for-profit sector, including at the Variety the Children's Charity, YWCA, Crafts Council, NT Centenary of Federation and Australia Day Council NT. She now focuses her time serving on multiple local boards providing governance expertise through her experience as a Company Director and accountant

Product Overview

NASC's product portfolio will continue to expand as new, local market opportunities are identified in each region

Biofertiliser
sludge

Natural
pigment
for dyes

Human &
Animal
food

Raw
seaweed
for existing
offtakers

Gels for
cosmetics

Multi-stage extraction for different product applications (see support slide)

Products adaptable for local market profile

Ongoing product development trials undertaken with the University of Western Australia

Designed for low technical complexity and adoption regionally

Our Foundation & Pillars

North Australian SeaCulture is a seaweed-growth and product-development company with the mission to create regional economic impact.

- Australia is competing with high-yield, low-cost existing operations, predominately in Asia and requires a **bespoke business model** for success
- SeaCulture has developed a **three-pillar approach** to address this.
- SeaCulture is a business built on the **foundation** of Empowering Coastal Communities Through Seaweed Innovation
- Existing markets will be leveraged for initial revenue generation while **higher-value products** are developed and **sites naturally scale**

Pillar 1: Operations & Training

SeaCulture is built on a team of technical experts who can provide training and project support as each site is developed.

- ✓ **School-based STEM program.** This program will include employees & collaborators from NASC to introduce concepts that feed into a successful seaweed industry including the growth cycles, infrastructure designing, what can be made and what it can be used for.
- ✓ **Internships & employment.** a 4-week paid internship program will begin once each project site reaches stage 4 (see next slide)
- ✓ **Site operations.** Each site will start with a project manager focused on community engagement and coordination followed by approximately three operators, ideally from the internship program
- ✓ **SeaCulture core team.** This group consists of a technical experts in engineering, marine biology, economics and marketing

SeaCulture

Pillar 2: Project Design

NASC is passionate about unlocking North Australia through a five-stage project plan. Our current focus is the Kimberly and Northern Territory as shown on the following slides

- ✓ **Stage 1: Project scoping.** Assessing existing supply, market and resourcing capacity to develop a local seaweed industry
- ✓ **Stage 2: Site validation.** Each site is unique so seasonal trials will be undertaken to ensure native seaweed species can be grown in the selected areas
- ✓ **Stage 3: Data analysis & validation.** Using the data from stages 1 & 2, the project will be assessed for environmental, social and economic impact
- ✓ **Stage 4: Site development.** With initial deployment of infrastructure and seed lines followed by organic scale-up
- ✓ **Stage 5: Product development.** Based on local offtake agreements & product specifications from pillar three

Pillar 3: Research & Development

SeaCulture has three key research streams, each identified to de-risk the integration of a sustainable seaweed industry in regional Australia.

- ✓ **Stream 1: Seaweed growth.** NASC will develop techniques for tropical seaweed cultivation which can be replicated across Northern Australia. This will include local seed banks and monitoring
- ✓ **Stream 2: Farming.** developing alternative deployment and harvesting techniques which reduce the load on human intervention during farming.
- ✓ **Stream 3: Product development.** developing low process intensity, multiple product stream techniques that can be directly applied to regional areas in Australia. Currently being addressed through the founders PhD in “Engineering seaweed products through water extraction to improve soil fertility”
