

Drone-Hand: Autonomous livestock management software

Edward Barraclough
Founder & CEO

Seb Haan
Co-Founder & Machine
Learning Lead

Supported by:

Harsh Realities of Livestock Production

Eg: Australia's \$100B livestock industry

Northern Cattle stations annually:

- >\$100K / year on heli-mustering at ~70% success rate
- >500M preventable cattle deaths
- >300+kms travelled per day for water checks + vehicle & fuel
- 10-40% of cattle "missing"
- 10-15 significant helicopter accidents

Aus Feedlots annually:

- ~\$50M losses to preventable disease
- >5,000 serious injuries
- >1.6M livestock on feed
- >3M livestock processed
- ~1 person per 1000 cattle
- >1,000 staff hospitalisations per year
- ~10% livestock lost to stress

Smaller Livestock Farms annually:

- ~\$540M preventable livestock deaths
- ~3-8 hours per day on checks
- >10% of lambs lost
- \$70K-\$120K per year on labour
- ~1.7 staff per livestock farm
- \$4.5B in insurance claims due to climate events

Flexible & Scalable Software Subscriptions & Turn-Key Packages

“Scout”

*Essential tier:
Small Farms*

Small mixed livestock farms

Agronomists

Feedlots

**Semi-Autonomous
Quadcopters drones**

**Portable and fast
deployment**

“Ranger”

*Extended tier:
Cattle Stations*

Livestock, Water & Infrastructure

Augment Helicopter Mustering

Large stations & ranches

**Semi-Autonomous
Long-range drones**

**Rugged, long-range
VTOL drones
Up to 8 hours endurance***

“Fleet”

*Enterprise tier:
Off-site Operations*

Feedlots & Dairies

Off-site livestock operations

**Fully-Autonomous
Drone-Docks**

**Scheduled, Off-Site
Monitoring**

“Sentinel”

*Cattlepulse tier:
High Density Operations*

Feedlots & Processing

Saleyards & Logistics

Biosecurity

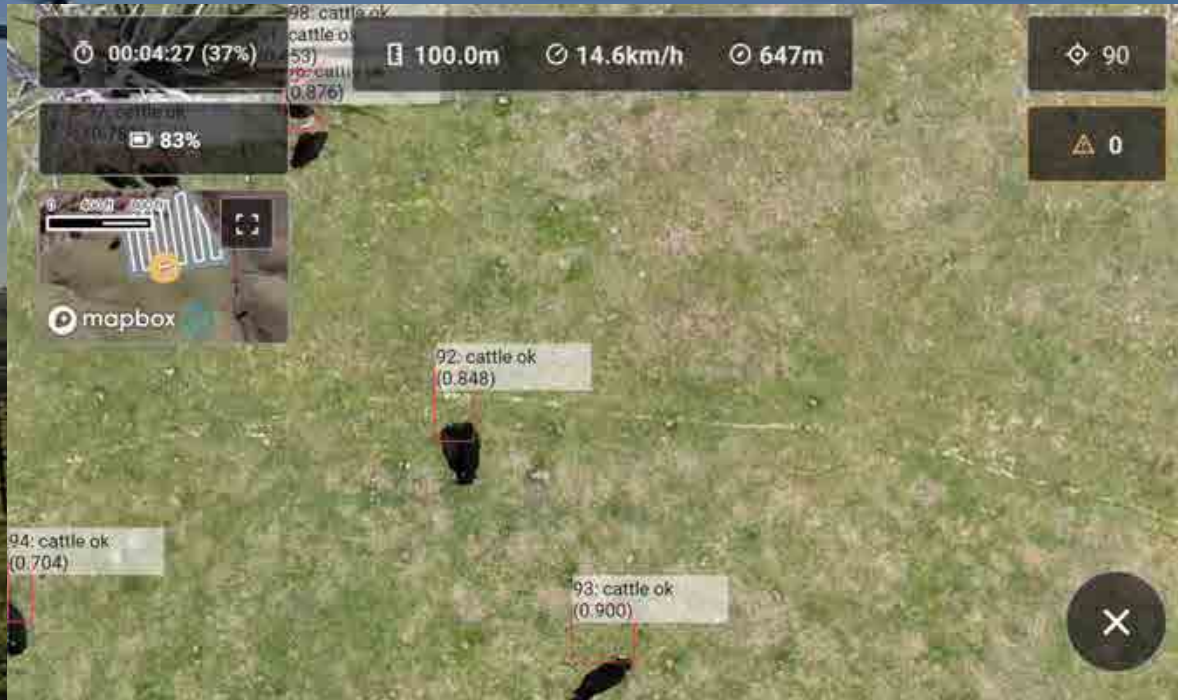

**24 Hour
Fixed-Cameras**

**Count, Condition Score,
Disease Detection**

Autonomous Livestock & Property Monitoring

Small-Medium Farms

- Location
- Count
- Health & Well-Being
- Water points
- Fences & Pasture
- Stocktakes & Reports

"Scout"
Essential Tier

Autonomous monitoring & Long-range mustering

Large Cattle Stations

- All capabilities as Scout +
- Pre- & Post Muster Sweep
- Autonomous Mustering
- Lick & Feeder checks
- Drone-Dock Compatible
- Up to 8 hours flight time*

"Ranger"
Extended Tier

Product "Fleet"

Fully Autonomous Drone dock integrations

Feedlots & Off-Site Operations

- All capabilities as Scout +
- Customized data collection
- Scheduled flights
- Hands-off automated System

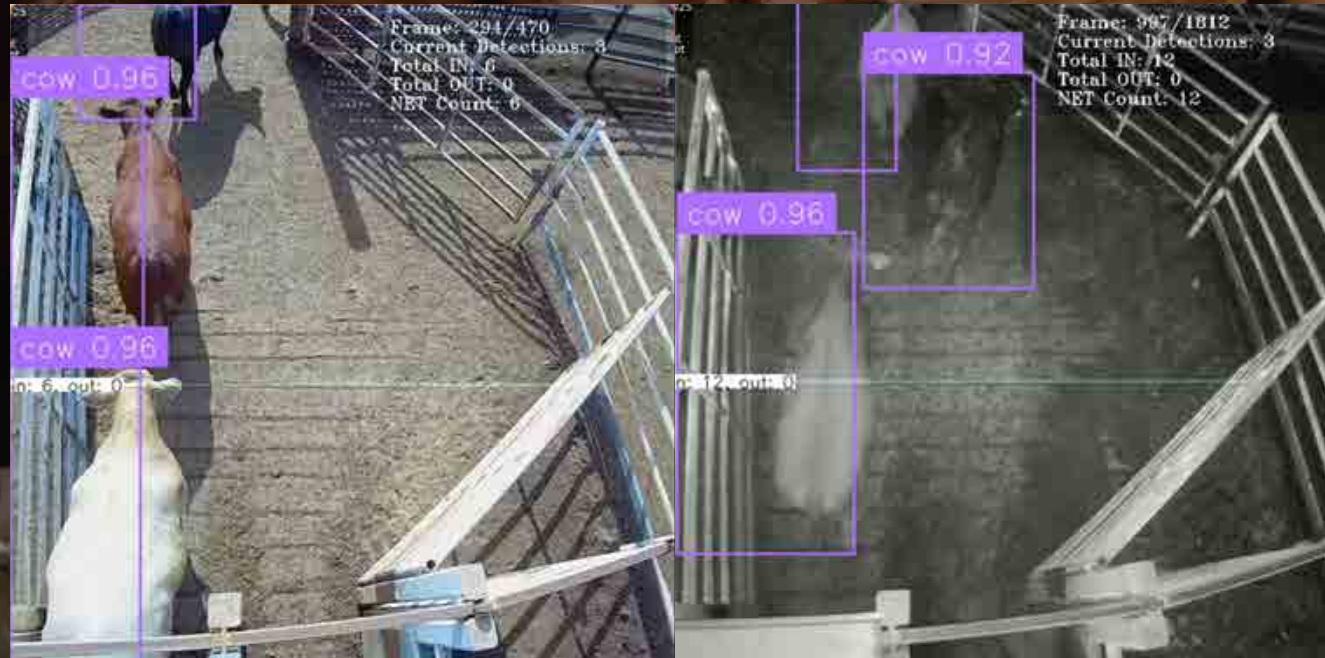

"Fleet"
Enterprise Tier

Accurate 24 hour Fixed Camera Monitoring Systems

Feedlots & High-density Operations

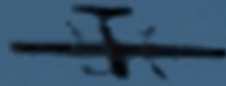

- 24 Hour intake counts
- Condition & performance
- Disease & injury detection
- Co-developed with JBS Aus & MLA
- Local or cloud processing

"Sentinel"
CattlePulse Tier

Independently Validated 99.99% accuracy

Customer Benefits & ROI

- 60–80% reduction in routine livestock checks
- \$40k–\$200k+/yr avoided helicopter costs (large stations & feedlots)
- Reduced livestock losses through earlier detection
- Safer operations vs manned aerial mustering & ground monitoring
- Consistent, repeatable data at scale

DRONE-HAND

Customer Experience: Value vs Effort

Customer Concerns

- Data ownership & security
- Time to ROI
- Operational disruption
- Regulatory complexity

Time to Value

- **Essential:** same day
- **Extended:** 2 – 3 weeks (approvals + training)
- **Enterprise:** 2 - 3 weeks, fully managed
- **ROI** typically within first season

Adoption Friction

- **Essential:** <30 min setup, minimal training
- **Extended:** 1–3 days training + approvals
- **Enterprise:** deployment handled by Drone-Hand & partners
- **Fixed cameras:** 1–3 days to insights

**Figures indicative; vary by property size, geography and operations.*

Works Without Connectivity

- On-Device processing
- Real-time actionable data
- Locally stored & secure data

Consistent Performance Anywhere

Proven in Real Operations

- Co-developed with industry
- 99.99% accuracy validated by JBS Aus
- Trialled in multiple countries

Driven By Industry Needs

What We Do Differently

One System, Multiple Jobs

- Livestock + infrastructure + monitoring
- No need for multiple systems
- Collaborative not siloed

Replaces Complexity

Fits How you Operate

- Minimal disruption
- Works alongside existing workflows
- Fast time to value

Easy Integration

Momentum & Validation

Commercial & Operational Validation

- Trials Completed: Australia & New Zealand
- Early Commercial Deployments in Place
- Pastoral & Feedlot Use Cases Validated at 99.99% accuracy
- Strong engagement with northern pastoral operations & feedlots
- Established Channel Partnerships
- Invited Speaker to NTCA & Developing Northern Australia Conferences

Co-Development & Industry Partners

- Projects Co-Developed with JBS Aus and Co-Funded by Meat & Livestock Australia
- Live Deployments in Commercial Feedlots & on station
- On-Going Development with Large-Scale Operators
- Darwin based distribution & maintenance hub JV with BETA-UAS
- AusAgritech Committee member
- Multi-Award winner

Built & Tested in Real Operations
